Re: DA 12-1863, IB Docket No. 12-340  
RM-11683, Reply Period

Dear Ms. Dortch:

I wrote during the earlier comment period and expressed my opinion that the FCC should grant the application for license modification filed by LightSquared.

Many of the comments made by others during that comment period make me believe even more strongly that only LightSquared can solve some of the most vexing technological problems facing America, and particularly the problem of how to provide broadband cell phone service in rural areas.

I serve as Chief Financial Officer (CFO) of the Public Safety Institute of Kentucky, LLC, an organization which assists county attorneys across Kentucky in providing traffic and safety education to minor traffic offenders.

I told you in my earlier letter that as a businessman operating a business which spans Kentucky, the lack of good wireless service here hampers my own business, because it hampers my ability to communicate. Outside populated areas in Kentucky, it is virtually impossible to complete a cell phone call without either dropping the call at some point, or driving into a region which has no cell service at all. I understand that this problem will take a substantial investment to solve.

The Technology Policy Institute noted, in its comments: "As Chairman Genachowski noted in an October speech, technology is not the only hurdle for developing increased broadband capacity, 'it also requires massive amounts of private capital.' LightSquared has already invested over \$4

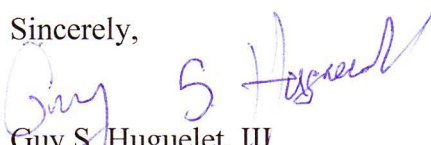

billion in its network. This investment demonstrates the potential value the spectrum is capable of producing if deployed for mobile broadband.”

As a businessman, I understand the need for capital for investment in infrastructure, and I particularly respect the type of investment that LightSquared has made in systems that will help average people in rural areas in our nation.

LightSquared has already invested over \$4 billion in its network, and this is all in the form of private investment, with no government funding whatsoever.

Along with many others who have offered their comments, I continue to strongly urge the FCC to approve LightSquared’s pending application. Thank you.

Sincerely,

Guy S. Huguelet, III

Chief Financial Officer

Public Safety Institute of Kentucky, LLC
